# PRODUCT INFORMATION BULLETIN

## EAGLE-EYE RX Remote Infrared Receiver PCB MODEL 30-5102

### DESCRIPTION

The EAGLE-EYE REMOTE RECEIVER PCB is designed to receive I.R. information from the model #30-1000 I.R. TRANSMITTER. This P.C. Board is designed to fit in an existing X.P. Headlamp enclosure. The informations is transmitted to the I.R. control board using a 3 conductor cable.

### INSTALLATION

Disconnect AC power before proceeding with installation.

1. Mount the Eagle-Eye Receiver PCB on the existing bracket in the headlamp enclosure.
2. Make the following connections on the terminal strips:

| TERM 1   |            |
|----------|------------|
| TERMINAL | CONNECTION |
| 1        | GND        |
| 2        | Data       |
| 3        | DC (+)     |

### DIMENSIONS

### CONTROLS AND INDICATORS

NOTE: LED1 on the PC Board will illuminate while it detects a signal from the 30-1000 I.R. Transmitter. It is normal for this LED to occasionally "blink" when no I.R. signal is present. This is caused by "noise" in the area. This will no affect the operation of the system.
