AIR-EAGLE® SR PLUS 2.4 GHz RF Transmitter MODEL 36AN-1000-DC

DESCRIPTION

The AIR-EAGLE SR PLUS, MODEL 36AN-1000-DC is an RF transmitter capable of sending two 4-20mA or 0-5VDC inputs to a remote receiver. Transmitters and receiver can be combined in any quantity to create a medium-range radio frequency system that monitors electrical apparatus from safe, convenient locations of up to 600 feet away. This unit is user-programmable for up to eight network frequencies to allow multiple systems to operate simultaneously in the same area without interference.

INSTALLATION

1. Mount the AIR-EAGLE SR PLUS TRANSMITTER in a convenient location
2. Install wiring to input terminal strip.
3. Install antenna onto TNC connector on side of unit.
4. Connect supplied power input cable to your external power source.

INPUT OPTIONS & FREQUENCY SET-UP

This transmitter is factory set for 4-20mA input, 4mA link loss and to operate on frequency #1. If you wish to change the default settings, follow the instructions using the table below:

- 1) Remove power from unit

36AN-1000-120VAC 4-20mA Installation

The above diagram shows a 4-20mA sensor hooked to channel 1 input. The 250 Ohm input resistor will drop a voltage of 1 Volt at 4mA and 5 Volts at 20mA. The sensor may be of any type and voltage that has a 4-20mA output. Even if the sensor runs on a voltage higher than 5 volts the current is still maintained between 4 and 20 milliamps so that the voltage drop on the resistor is always between 1 and 5 volts. Remaining voltage is dropped internally in the sensor. Loop powered sensors are not able to be used on this particular unit.
